Burp Suite

Aim:

To capture, inspect and tamper with live HTTP requests between a client and a server to understand how the client side data can be manipulated.

Procedure:

- 1) Install burp community edition
- 2) Start burp suite

Next → start burp

- 3) Open the proxy section

Proxy → intercept

Make sure intercept is on then will see browser button in same tab.

- 4) Intercept the request:

Open any site

Return to Burp suite → Proxy → intercept

GET /HTTP /2

Host: portswiggy.net

User-Agent: chrome /150.54-0

Accept: text/html

The browser will be ~~kept~~ loading

because the interrupt is on. Inf that we

can see the request like mentioned in

the above format.

5) Manipulate request

We can see the request and we can manipulate it.

?category = gifts

we change to

?category = pets

Therefore the browser can load the pets

section even if user clicks gifts section

like this we can implement burp suite.
